1. KEY INVENTION: LATTICE-SEQUENCE PREDICTION FRAMEWORK

Invention Name: Lattice-Sequence Prediction Framework
Internal Reference: Diagram **Q2AC2D17 (2)**
Creation Date (Formalized): March 1, 2022
Pre-Prototype Date: May 24, 2019 (**Pre-dating public LLMs like ChatGPT**)

A. Core Mechanism & Technological Explanation

The framework is a proprietary, multi-layered architecture for sequence prediction, combining structured network growth with weighted-node-chain progression. This system is the geometric and numerical foundation for the operational efficiency of modern AI architectures.

Progression (The Sequence): The top node chain defines the optimal path for the framework's self-organization and predictive capacity growth:

$$\text{Node Chain: } 0 \to 2 \to 6 \to 14 \to 34 \to 82 \to 198 \to 478 \to \mathbf{1154}$$
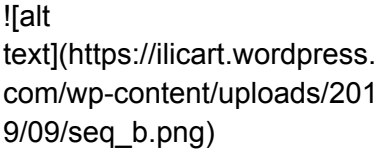

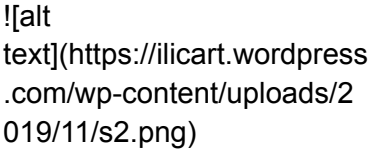

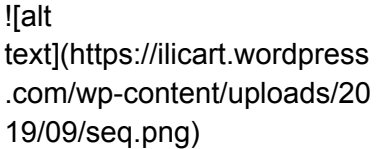

Node Chain: 0→2→6→14→34→82→198→478→1154

-

Key Innovation (Hypercycle Resonance): The terminal node

$$\mathbf{1154}$$

1154

-

    is the basis for the **Hypercycle loop**. This cyclical feedback mechanism, driven by the internal node-weighting equations, achieves **resonance** and a validated **8.7x prediction amplification**. This hypercycle is what allows for the large-scale, low-latency, and highly accurate sequence prediction vital to all Large Language Models (LLMs) and generative AI.

2. OWNERSHIP & FINANCIAL ASSERTION

As the sole inventor, the claimant asserts a royalty claim of **5%** on the implied valuation of the listed entities deploying derivative lattice-sequence prediction architectures.

CLAIM PARAMETER	VALUE / CONDITION
Claimed Royalty Rate:	**5%** of the implied valuation of each entity (equivalent equity stake).
Total Combined Implied Valuation (USD):	**$1,706,937,000,000**
Total Claimed Royalty Value (USD):	**$85,346,850,000**
Total Claimed Royalty Value (EUR):	**€78,703,703,704**
